

Eurotech Cloud Disaster Recovery Service

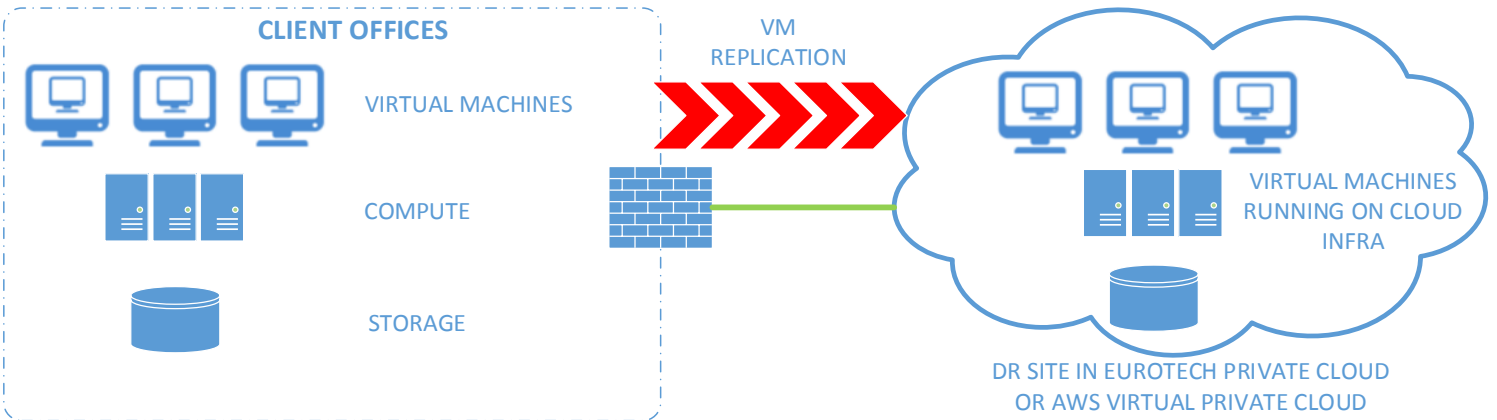

Eurotech’s Cloud Disaster Recovery Service delivers enterprise business continuity in the cloud as an OPEX cost

The Eurotech Cloud Disaster Recovery Service (CDRS) offers Clients a robust and scalable disaster recovery (DR) solution, at the lowest operational cost possible, by leveraging the economies of scale of cloud infrastructure. CDRS contributes to the development of a comprehensive Business Continuity Plan (BCP) in the event of a disaster, by ensuring that all IT systems and data is fully recoverable at a remote site. Normally, this requires the deployment of a full physical DR site with the associated costs of mirroring all systems to that site. CDRS delivers all of the capabilities of a physical DR site without the complexity and cost. When integrated with a BCP, this provides a business the ability to withstand the shock of a major disaster without the threat of having to close its doors.

How Cloud Disaster Recovery works

CDRS is hosted from a Eurotech Tier 3/4 datacenter facility with resilient power, cooling and connectivity as well as military-grade physical security. A corporate VPN connection or leased line between the Client’s offices and the Eurotech datacentre provides the connectivity (from 10Mbps to 10Gbps) to the service. Snapshot replication of virtual machines and data is passed from the primary site to Eurotech’s cloud datacentre and stored in a resilient and scalable platform that possesses both the compute and storage capacity needed to spin up the Client’s entire virtual infrastructure in the event of a disaster. Eurotech’s CDRS offers class-leading Recovery Point Objectives (RPO’s) of zero and Recovery Time Objectives (RTO’s) of seconds to minutes (service options dependent) to ensure your business can continue operating almost without interruption and without loss of data.

Business Benefits	Technical Benefits
OPEX model for DR in the cloud — Purchase DR on a monthly OPEX basis—no CAPEX investment required. Expand infrastructure seamlessly with your business as it grows	Reduce risk of data loss or outages — Have a complete replica of your production environment on standby 24x7 to reduce the risk of data loss or service outages
Protect your business — Provide a resilient and comprehensive Disaster Recovery solution for IT systems as part of a BCP	Ease of management — Simple management of failover and fallback

Scope of the Service

CDRS offers flexible deployment options and service classes and can be tailored to suite business requirements. The base service features are defined in the CDRS Service Description but can be further extended to include options such as custom integration with the Client site and/or a fully managed service wrapper to outsource the specific costs and risks associated with managing a Disaster Recovery infrastructure in-house.
